AI Engineer | Python | Generative AI | RAG & Agentic Systems

SUMMARY

AI Engineer with 2+ years of software development experience in enterprise banking applications. Builds model-powered workflows with Python, FastAPI, LangChain, LangGraph, Retrieval-Augmented Generation (RAG), and vector databases. Focused on contextual retrieval, reliable orchestration, LLM evaluation, API integration, and cloud delivery.

EXPERIENCE

Python Full Stack Developer May 2024 - Present

Tata Consultancy Services Mumbai, India

- Develop and maintain enterprise mortgage-processing applications using Python, FastAPI, Django, React, and SQL.
- Build REST APIs and integrate LLM-powered workflows for contextual banking queries, policy lookup, and document processing.
- Apply RAG, LangChain, LangGraph, and vector databases to connect language models with relevant documents and conversation context.
- Containerize services with Docker and contribute to Azure DevOps CI/CD workflows for build and deployment.
- Evaluate AI responses for faithfulness and relevance, troubleshoot application issues, and collaborate with QA through Agile sprint cycles.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, TypeScript

Generative AI: RAG, LangChain, LangGraph, LLM Integration, Vector Databases, LLM Evaluation

Agents & Model APIs: Tool Calling, Stateful Workflows, Human Review, Gemini API, OpenAI API

Backend & Frontend: FastAPI, Django, REST APIs, Microservices, React, Node.js

Data: MySQL, PostgreSQL, SQLite, Redis

Cloud & Delivery: AWS, Microsoft Azure, Docker, Azure DevOps, GitHub Actions, Git, Postman

Further Practice: Domain-specific Fine-tuning, Agent Memory, MLOps

CERTIFICATIONS

AWS Certified Solutions Architect - Associate (SAA-C03) - Amazon Web Services

Microsoft Certified: Azure AI Cloud Developer Associate (AI-200) - Microsoft

Microsoft Certified: Azure Fundamentals (AZ-900) - Microsoft

PROJECTS

Enterprise Banking RAG Chatbot and Assistant Python / FastAPI

- Built contextual banking policy lookup with RAG and vector retrieval, and stateful multi-turn workflows using LangChain and LangGraph.
- Applied response evaluation for relevance, faithfulness, and hallucination checks, with domain-specific retrieval improvements.

FrameForge - Agentic Video Generation Pipeline Python / FastAPI

- Built a supervised creative-brief-to-MP4 workflow with optional Gemini planning and speech, OpenAI function calling, and FFmpeg composition.
- Added persisted checkpoints, worker leases, bounded retries, artifact provenance, and human approval gates to support restart recovery.

IncidentIQ - AI-assisted Incident Investigation LLM APIs / Evidence

- Integrated an OpenAI-compatible model adapter with bounded evidence snapshots, validated output, heuristic fallback, and human verification.
- Implemented reliable event processing and stale-result rejection with Kafka, PostgreSQL, Redis, and observability tooling.

EDUCATION

Master of Computer Applications (MCA) 2021 - 2023

ABES Engineering College

Bachelor of Computer Applications (BCA) 2017 - 2020

Institute of Technology and Science, Ghaziabad
